E Engineering Success

8. The total exports and revenues from the exports of a country are given in the two pie charts below.

The pie chart for exports shows the quantity of each item as a percentage of the total quantity of exports. The pie chart for the revenues shows the percentage of the total revenue generated through export of each item. The total quantity of exports of all the items is 5 lakh tonnes and the total revenues are 250 crore rupees. What is the ratio of the revenue generated through export of Item 1per kilogram to the revenue generated through export of Item 4 per kilogram?

9. X is 1 km northeast of Y. Y is 1 km southeast of Z. W is 1 km west of Z. P is 1 km south of W. Q is 1 km east of P. What is the distance between X and Q in km?

| (A) | 1 | $(B)\sqrt{2}$ | (C) √3 | (D) | 2 |
|---------|-----|---------------|--------|-----|---|
| Answer: | (C) | | | | |
| | | | | | |

10. 10% of the population in a town is HIV⁺. A new diagnostic kit for HIV detection is available; this kit correctly identifies HIV⁺ individuals 95% of the time, and HIV- individuals 89% of the time. A particular patient is tested using this kit and is found to be positive. The probability that the individual is actually positive is _____.

Answer: (0.48 to 0.49)

42. A shuttle loom producing 3 up 1 down twill fabric is running at 180 picks per minute. The angular velocity of the tappet (cam) shaft in radian per second, accurate to two decimal places, would be

Answer: (4.67 to 4.74)

43. A yarn is passing over a multiplicative tensioner with an angle of wrap of 90°. If the input yarn tension is 100 cN and coefficient of friction between yarn and tensioner is 0.2, then the output yarn tension in N, accurate to two decimal place, would be _____.

Answer: (1.35 to 1.39)

44. During beat-up, possibility of bumping increases if

- (A) Warp tension is low and cloth fell displacement is low
- (B) Warp tension is low and cloth fell displacement is high
- (C) Warp tension is high and cloth fell displacement is low
- (D) Warp tension is high and cloth fell displacement is high

Answer: (B)

45. A needle-punched nonwoven fabric has 2 mm thickness and $400g/m^2$ areal density. If the fibre density is $0.9g/cm^3$, the volume porosity (%) of the fabric, accurate to the nearest integer, will be _____.

Answer: (78)

46. For a square plain fabric, crimp in one set of yarns would be completely removed without jamming, if the ratio of modular length (*l*) to the sum of the yarn diameters (D) is

(A) Between $\pi/8$ and $\pi/6$

(B) Between $\pi/6$ and $\pi/4$

(C) Between $\pi/4$ and $\pi/2$

(D) Greater than $\pi/2$

Answer: (D)

| 48. Ansv | A 60.5 tex yarn with an unever irregularity of the yarn, accura wer: (1.1) | enness CV of 10% is produced form 0.5 to te to one decimal place, will be | ex polyester fibre. The index of |
| 49. | The vibroscope method for det | ermination of fibre fineness does NOT tak | e into account |
| | (A) Length of specimen | (B) Natural frequency | y of specimen |
| | (C) Tension in specimen | (D) Tensile strength o | of specimen |

Answer: (D)

50. In the context of Kawabata Evaluation System, match the fabric properties from Group I with the units from Group II.

| Group I | Group II |
|--|--------------------------------|
| P. Tensile energy | $1. \text{gf.cm}^2/\text{cm}$ |
| Q. Linearity of load-elongation curve | 2. percentage |
| R. Bending rigidity | $3. \text{gf.cm}/\text{cm}^2$ |
| S. Compressional resilience | 4. dimensionless |
| (A) P-3, Q-4, R-1, S-2 | (B) P-3, Q-1, R-4, S-2 |
| (C) P-2, Q-4, R-1, S-3 | (D) P-1, Q-4, R-3, S-2 |

Answer: (A)

51. The Barium Activity Number (BAN) was determined using the standard procedure. For this, 30 mlof $0.25N \text{ Ba}(OH)_2$ solution was used, in each of the three titrations, i.e. (a) blank titration, (b) backtitration where mercerized fabric sample was immersed and (c) back titration where unmercerized fabric sample was immersed and (c) back titration where unmercerized fabric sample was immersed in Ba(OH)_2 solution. If the volume (ml) of 0.1N HCl consumed was 10,1 and 4.5 respectively, the BAN of the mercerized sample, accurate to one decimal place, is ______.

Answer: (163 to 164)
