## Civil Engineering

## PAPER-I

## Question Paper Specific Instructions

## Please reach each of the following instruction carefully before attempting questions:

There are EIGHT questions divided in TWO sections.
Candidate has to attempt FIVE questions in all
Questions No. 1 and 5 are compulsory and out of the remaining, any THREE are to be attempted choosing at least ONE question from each section.

The number of marks carried by a question/ part is indicated against it.
Wherever any assumptions are made for answering a question, they must be clearly indicated.

Diagrams/figures, wherever required, shall be drawn in the space provided for answering the question itself.

Unless otherwise mentioned, symbols and rotations carry their usual standard meanings.

Attempts of questions shall be counted in sequential order. Unless struck off, attempt of a question shall be counted even if attempted partly.

Any page or portion of the page left blank in the QCA Booklet must be clearly struck off. Answers must be written in ENLISH only.

## SECTION 'A'

1. (a) (i) How are aggregates classified based on particle size? What is bulking of sand?
(ii) How is workability of concrete defined as per Indian Standard Specification IS 1199-1959? Briefly explain the method of measurement of workability through compacting factor test.
(b) A semi-composite steel bar as shown in Figure 1 is loaded at free end with an axial load of 50 kN . Determine the axial stiffness of the system and extension of the free end. Diameter of steel bar is 40 mm , outer diameter of the concrete portion is 200 mm . Modulus of elasticity of steel $=200$ GPa , Modulus of elasticity of concrete $=20 \mathrm{GPa}$. Central portion of the bar is embedded with concrete.

Figure 1
[12 Marks]
(c) A machine is mounted at the centre of a simple supported beam that can exert a harmonic load $\mathrm{F}(\mathrm{t})$ $=20 \sin (0.12 \mathrm{t}) \mathrm{kN}$ in vertical direction. The length of beam is 4 m and its cross-section is uniform throughout. Cross-section of beam: width 20 mm and depth 40 mm . A weight $\mathrm{W}=200 \mathrm{~N}$ is suspended from the centre of the beam by a spring of spring constant $K_{s}=40 \mathrm{~N} / \mathrm{m}$. Determine the natural frequency of the weight $W$. Neglect mass of the beam and weight of machine. $\mathrm{E}=2 \times 10^{5}$ MPa.
[12 Marks]
(d) A cable of uniform cross-section hangs between two points A and B, which are 150 m apart. The end ' A ' of the cable is 3 m above the other end of the cable. The sag of the cable measured from ' B ' is 2 m . If the cable carries a UDL of $12 \mathrm{kN} / \mathrm{m}$, determine the maximum tension in the cable. Also find the horizontal pull.
[12 Marks]
(e) A $200 \mathrm{~mm} \times 150 \mathrm{~mm} \times 10 \mathrm{~mm}$ aluminium plate is subjected to uniform bi-axial stresses $\sigma_{\mathrm{x}}$ and $\sigma_{\mathrm{y}}$. Two strain gauges A and B are attached to the surface of the plate as shown in the Figure 2. If readings in strain gauges are $\varepsilon_{\mathrm{A}}=200 \times 10^{-6}$ and $\varepsilon_{\mathrm{B}}=285 \times 10^{-6}$, what are the values of $\sigma_{\mathrm{x}}$ and $\sigma_{\mathrm{y}}$ ? What is the reduction in thickness of the plate as a result of stresses?

Take Young's modulus $\mathrm{E}=75 \mathrm{GPa}$ and Poisson's ratio $\mathrm{v}=0.33$.

Figure 2
2. (a) A steel tube is to be used as a post for a road sign board as shown in Figure 3. The maximum wind pressure on the sign board is $1960 \mathrm{~N} / \mathrm{m}^{2}$. The angle of rotation of the tube at the bottom of the sign board marked as A must not exceed $4^{\circ}$ and the maximum shear stress (due to torsion only) must not be greater than 38 MPa . Determine the mean diameter of the tube if the wall thickness is 4.2 mm . Take $\mathrm{G}=70 \mathrm{GPa}$. Assume wind is transmitting only over the sign board portion.

Figure 3
(b) In a strained body the normal stresses on three planes inclined as shown in Figure 4 are 60 MPa (Tensile), 80 MPa (Tensile) and 100 MPa . Determine the- shear stresses acting on these planes. Also find the principal stresses.

Figure 4
(c) (i) Describe how the compounds of clinker affect the properties ofcement.
(ii) What do you mean by normal consistency of cement? What is itssignificance? How is it tested?
3. (a) Develop the flexibility matrix for the beam shown in Figure 5, withrespect to the generalized coordinates mentioned. EI is constant for allmembers.

Figure 5
(b) A bar of length 1.2 m , diameter 40 mm is subjected to an axial tensile load of 130 kN and a twisting moment of $600 \mathrm{~N} . \mathrm{m}$. Ifthe same materialyielded at an axial stress of $200 \mathrm{~N} / \mathrm{mm}^{2}$, determine the safety factorassociated with the bar, considering
(i) Principal stress failure theory
(ii) Maximum shear stress theory
(iii) Distortional strain energy theory

Take $\mathrm{E}=200 \mathrm{GPa}$ and $\mu=0.25$
(c) Determine the forces in the members of the truss shown in Figure 6. Allmembers have same axial rigidity.

Figure 6
4. (a) (i) Differentiate in brief between Thermoplastic and Thermosetting plastic.
(ii) Discuss in brief the methods of preserving timbers by water soluble preservatives.
[20 Marks]
(b) Sketch influence line diagram for the bending moment at a point 'C'located 6 m from one of the supports of a three hinged symmetricalparabolic arch having span of 18 m and central rise 2.5 m . Locate thepoint from where the moving load changes the sign of bending moment at C .
[20 Marks]
(c) Frame ABCD shown in Figure 7, is acted upon by a UDL of intensity $20 \mathrm{kN} / \mathrm{m}$ on the horizontal span. What should be value of horizontalforce 'P' applied at C, that will prevent sway of the frame? Draw BMD.

EI is same for all members

Figure 7

## SECTION - 'B'

5. (a) A tie member of a truss consisting of an angle section ISA $65 \times 65 \times 6$ iswelded to a gusset plate. Design a fillet weld to transmit a load equal tofull tensile strength of the plate. Assume shop weld. Take grade of steelE 250 ( Fe 410 ). Also sketch the weld length.

Properties of ISA $65 \times 65 \times 6$

$$
\begin{aligned}
& \mathrm{A}=744 \mathrm{~mm}^{2} \\
& \mathrm{C}_{\mathrm{z}}=18.1 \mathrm{~mm}
\end{aligned}
$$

Thickness of gusset plate is 10 mm .
[12 Marks]
(b) Find the web buckling and web crippling strength of a beam (ISLB 350)simply supported at both ends. Assume the stiff bearing length 100 mmand grade of steel E 250 .

Section properties of ISLB 350: $\mathrm{t}_{\mathrm{w}},=74 \mathrm{~mm}$

$$
\mathrm{t}_{\mathrm{f}}=114 \mathrm{~mm}
$$

$\mathrm{R}=16 \mathrm{~mm}$
$\mathrm{R}=$ Radius of root.
Given: Design compressive stress $\mathrm{f}_{\mathrm{cd}}, \mathrm{N} / \mathrm{mm}^{2}$

| $\mathbf{K L} / \mathbf{r}$ | $\mathbf{f}_{\mathrm{cd}}$ |
| :---: | :---: |
| 90 | 121 |
| 100 | 107 |
| 110 | 94.6 |

(c) A symmetrical reinforced concrete frame building $25 \mathrm{~m} \times 25 \mathrm{~min}$ plan islocated in seismic zone IV on hard soil. The height of the building is 30 m . Determine the base shear due to earthquake.

Given: $\mathrm{Z}=0.24, \mathrm{I}=1.5$
Total dead load= $1,50,000 \mathrm{kN}$
Total live load $($ effective $)=50,000 \mathrm{kN}$

$$
\begin{aligned}
& \mathrm{T}=0.09 \frac{\mathrm{~h}}{\sqrt{\mathrm{D}}} \\
& \frac{\mathrm{Sa}}{\mathrm{~g}}= \begin{cases}1+15 \mathrm{~T} & 0 \leq \mathrm{T} \leq 0.10 \\
2.5 & 0.10 \leq \mathrm{T} \leq 0.40 \\
1 / \mathrm{T} & 0.40 \leq \mathrm{T} \leq 4.0\end{cases}
\end{aligned}
$$

(d) A floor of an old building consists of 150 mm thick RC slab monolithicwith the beam of width 300 mm and total depth 400 mm . The beams are spaced $3.5 \mathrm{~m} \mathrm{c} / \mathrm{c}$ and their effective span (simply supported) is 7 m . Thebeams are reinforced with 5 Nos. $28 \phi$ bars as tension reinforcement. Determine the moment carrying capacity of the beams. Use M 25 andFe 500. Adopt limit state method of design. Nominal cover $=30 \mathrm{~mm}$.
Diameter of the stirrups $=8 \mathrm{~mm}$.
[12 Marks]
(e) What is Work Breakdown Structure (WBS) with respect to constructionplanning and management ? How is WBS classified into differentlevels?
[12 Marks]
6. (a) A simply supported reinforced concrete beam of size $300 \mathrm{~mm} x 500 \mathrm{mmis}$ reinforced with 5 Nos. 16 $\phi$ bars as tension reinforcement. Two barsare curtailed at quarter span from both ends. Find out the load carryingcapacity (UDL) of the beam having effective span of 6 m . Also designthe beam against shear force. Use M 25 and Fe 415 . Nominal cover=30 mm. Use limit state method of design. Show the reinforcement detail(cross-section) also. Use 2 Nos. $12 \phi$ bars as hanger bars.

| $\frac{\mathrm{M}_{\mathrm{u}}}{\mathrm{bd}^{2}}$ | 2 | 2.5 | 2.75 | 3 | 3.25 | 3.5 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{p}_{\mathrm{t}}$ | 0.51 | 0.61 | 0.74 | 0.83 | 0.91 | - |

| $\mathrm{p}_{\mathrm{t}}$ | 0.25 | 0.5 | 0.75 | 1.0 | 1.25 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\tau_{\mathrm{c}}, \mathrm{MPa}$ | 0.36 | 0.49 | 0.57 | 0.64 | 0.7 |

[20 Marks]
(b) A bracket plate is connected to a flange of ISMB 500 as shown inFigure 8. Find the safe load P carried by the joint. M 16 bolts of grade 4.6 are provided at a pitch of 50 mm and end distance 30 mm .

Given:
Thickness of bracket plate $=10 \mathrm{~mm}$
Width of flange $b_{f}=180 \mathrm{~mm}$
Thickness of flange $\mathrm{t}_{\mathrm{f}}=17.2 \mathrm{~mm}$
Steel grade of bracket plate Fe 410

Figure 8
(c) What is a crane?How is it used in the construction industry?Briefly explain three different types of cranes that are being used in construction works.
[20 Marks]
7. (a) Design a square column of height 3 m subjected to an axial load of 1500 kN under dead and live load condition. Use limit state method ofdesign. Assume effective length factor =1.2. Size of the column is fixedat $400 \mathrm{~mm} x 400 \mathrm{~mm}$. Show the reinforcement detail (cross-section). Use M 25 and Fe 500.
(b) In an industrial shed, it is proposed to provide a hot rolled sectionISMB 500 to carry a two-wheeled system crab on it. The crab can moveover the flange of the beam from one end to another end and each wheelof the crab is capable to carry a maximum vertical load of 60 kN (including self weight of wheel).
The centre to centre distance between two supporting ends of the beamis 6 m and the end of the beams are restrained against torsion.The space between two wheels $=2.4 \mathrm{~m}$. Take impact factor for verticalload as $25 \%$.
Verify the capability of the beam to carry the bending moment developeddue to vertical load only. Assume the section is plastic. Grade of steelE 250.
Given data:
Properties of ISMB 500:
$\mathrm{b}_{\mathrm{f}}=180 \mathrm{~mm}, \mathrm{t}_{\mathrm{f}}=17.2 \mathrm{~mm}, \mathrm{t}_{\mathrm{w}}=10.2 \mathrm{~mm}$
$r_{z}=202.1 \mathrm{~mm}, \mathrm{r}_{\mathrm{y}}=35.2 \mathrm{~mm}$
$\mathrm{Z}_{\mathrm{ez}}=1808.7 \mathrm{~cm}^{3}, \mathrm{Z}_{\mathrm{pz}}=2074.67 \mathrm{~cm}^{3}$
Critical stress, $\mathrm{f}_{\mathrm{cr}, \mathrm{b}}(\mathrm{MPa})$

| $\mathbf{K} / \mathbf{r}$ | $\mathrm{h} / \mathrm{t}_{\mathrm{f}}$ |  |
| :---: | :---: | :---: |
|  | $\mathbf{2 5}$ | $\mathbf{3 0}$ |
| 170 | 136.7 | 30 |
| 180 | 127.1 | 112.2 |

Design bending compressive stress to lateral buckling $f_{b d}$, for $f_{y}=250 \mathrm{MPa}$.

| $\mathrm{f}_{\text {cr,b }}$ | $\mathrm{f}_{\mathrm{bd}}(\mathrm{MPa})$ |
| :---: | :---: |
| 150 | 106.8 |
| 100 | 77.3 |

(c) The following table gives the activities in a construction project andother relevant information.

| Activity | Duration(Days) |
| :---: | :---: |
| $1-2$ | 20 |
| $1-3$ | 25 |
| $2-3$ | 10 |
| $2-4$ | 12 |
| $3-4$ | 6 |
| $4-5$ | 10 |

(i) Draw the network for the project.
(ii) Find the critical path.
(iii) Find free, total and independent floats for each activity.
8. (a) A combined footing is to be provided for two columns (size $300 \times 300$ ) spaced at $3 \mathrm{~m} \mathrm{c} / \mathrm{c}$. Axial load on each of the columns is 350 kN .The width of the footing is fixed at 1.4 m . Afoundation beam of $400 \mathrm{~mm} \times 800 \mathrm{~mm}$ is provided along the length. Design the foundationslab using M 25 and Fe 500 . Assume the thickness of the slab variesfrom 250 mm to 150 mm . Also show the reinforcement detail (incross-section) of the footing slab. Use limit state method of design.Bearing capacity of the soil is $100 \mathrm{kN} /$ ?.

Given:

| $\frac{\mathrm{M}_{u}}{\mathrm{bd}^{2}}$ | 0.3 | 0.35 | 0.4 | 0.45 | 0.5 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\mathrm{p}_{\mathrm{t}}$ | 0.070 | 0.082 | 0.094 | 0.106 | 0.118 |

| $\mathrm{p}_{\mathrm{t}}$ | $<0.15$ | 0.25 | 0.5 | 0.75 | 1.0 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\tau_{\mathrm{c}}, \mathrm{MPa}$ | 0.29 | 0.36 | 0.49 | 0.57 | 0.64 |

(b) A rafter member of a roof truss carries 40 kN compressive load(DL+LL) and 67 kN tensile load ( $\mathrm{DL}+\mathrm{WL}$ ). The effective nodal length of the member is 2.1 m . A circular tube section of nominal bore diameter of 50 mm is used. Check the adequacy of the section. Grade ofsteel $=\mathrm{E} 250$, Young's Modulus E $=200 \mathrm{GPa}$.

Given:
Sectional properties of the section $A=523 \mathrm{~mm}^{2}, r=20.3 \mathrm{~mm}$.
Outside diameter $=60.3 \mathrm{~mm}$.
Stress reduction factor, $\chi=\frac{1}{\phi+\sqrt{\phi^{2}-\lambda^{2}}}$
$\phi=0.5\left[1+\alpha(\lambda-2)+\lambda^{2}\right]$
$\lambda=\sqrt{\frac{\mathrm{f}_{\mathrm{y}}}{\mathrm{f}_{\mathrm{cc}}}}, \mathrm{f}_{\mathrm{cc}}=\frac{\pi^{2} \mathrm{E}}{\left(\frac{\mathrm{KL}}{\mathrm{r}}\right)^{2}}$

| Buckling class | a | b | c | d |
| :---: | :---: | :---: | :---: | :---: |
| $\alpha$ | 0.21 | 0.34 | 0.49 | 0.76 |

(c) A simply supported prestressed concrete beam of width 100 mm , depth 200 and span 10 m , carries a UDL of intensity ' $w$ '. If the member isprestressed with a parabolic cable having zero eccentricity at the endsand 60 mm eccentricity at mid, determine the value ' w ' for the following conditions, for effective prestressing force of 125 kN .
(i) Load Balancing Case
(ii) For no tensile stress condition at mid span
(iii) For cracking condition taking the tensile strength of concrete as $1.5 \mathrm{~N} / \mathrm{mm}^{2}$

For all cases neglect the weight of concrete.
