

GENERAL APTITUDE

Q. No.1-5 Carry One Mark Each

was its population 2 years ago? (A) 9,92,500 (B) 12,51,506 (C) 9,95,006 (D) 10,00,000 Answer: (D) 2. Given below are two statements and two conclusions. Statement 1: All purple are green. Statement 2: All black are green. Conclusion I: Some black are purple Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering. (iii) For humans, there are both positive and negative effects of using computers.	1.	The current population of a city is 11,02,500. If it has been increasing at the rate of 5% per annum, v	vhat
Answer: (D) 2. Given below are two statements and two conclusions. Statement 1: All purple are green. Statement 2: All black are green. Conclusion I: Some black are purple Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.		was its population 2 years ago?	
 Given below are two statements and two conclusions. Statement 1: All purple are green. Statement 2: All black are green. Conclusion I: Some black are purple Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (B) Only conclusion I is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering. 		(A) 9,92,500 (B) 12,51,506 (C) 9,95,006 (D) 10,00,000	
Statement 1: All purple are green. Statement 2: All black are green. Conclusion I: Some black are purple Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (B) Only conclusion I is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.	A	swer: (D)	
Statement 1: All purple are green. Statement 2: All black are green. Conclusion I: Some black are purple Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (B) Only conclusion I is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.	-		
Statement 2: All black are green. Conclusion I: Some black are purple Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (B) Only conclusion I is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.	2.	Given below are two statements and two conclusions.	
Conclusion I: Some black are purple Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (B) Only conclusion I is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.		Statement 1: All purple are green.	
Conclusion II: No black is purple Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (B) Only conclusion I is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.		Statement 2: All black are green.	
Based on the above statements and conclusions, which one of the following options is logically CORRECT? (A) Either conclusion I or II is correct (B) Only conclusion I is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.		Conclusion I: Some black are purple	
CORRECT? (A) Either conclusion I or II is correct (C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.		Conclusion II: No black is purple	
(C) Both conclusion I and II are correct (D) Only conclusion II is correct Answer: (A) 3. Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.			ally
 Answer: (A) Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering. 		(A) Either conclusion I or II is correct (B) Only conclusion I is correct	
 Computers are ubiquitous. They are used to improve efficiency in almost all fields from agriculture to space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering. 		(C) Both conclusion I and II are correct (D) Only conclusion II is correct	
space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.	A	swer: (A)	
space exploration. Artificial intelligence (AI) is currently a hot topic. AI enables computers to learn, given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.			
given enough training data. For humans, sitting in front of a computer for long hours can lead to health issues. Which of the following can be deduced from the above passage? (i) Nowadays, computers are present in almost all places. (ii) Computers cannot be used for solving problems in engineering.	3.	Computers are ubiquitous. They are used to improve efficiency in almost all fields from agricultur	e to
issues.Which of the following can be deduced from the above passage?(i) Nowadays, computers are present in almost all places.(ii) Computers cannot be used for solving problems in engineering.			
Which of the following can be deduced from the above passage?(i) Nowadays, computers are present in almost all places.(ii) Computers cannot be used for solving problems in engineering.			aith
(i) Nowadays, computers are present in almost all places.(ii) Computers cannot be used for solving problems in engineering.			
(ii) Computers cannot be used for solving problems in engineering.			
(iv) Artificial intelligence can be done without data.			
(A) (ii) and (iv) (B) (i) and (iii) (C) (ii) and (iii) (D) (i), (iii) and (iv)		· · · · · · · · · · · · · · · · · · ·	
	A		
Answer: (B)	A		

- Consider a square sheet of a side 1 unit. In the first step, it is cut along the main diagonal to get two 4. triangles. In the next step, one of the cut triangles is revolved about its short edge to form a solid cone. The volume of the resulting cone, in cubic units, is _____.
- (B) $\frac{2\pi}{3}$ (C) 3π (D) $\frac{3\pi}{2}$

Answer:

- 5. Consider the following sentences:
 - (i) I woke up from sleep
 - (ii) I woked up from sleep
 - (iii) I was woken up from sleep
 - (iv) I was wokened up from sleep

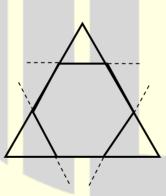

Which of the above sentences are grammatically CORRECT?

- (A) (i) and (iv)
- (B) (i) and (iii)
- (C) (ii) and (iii)
- (D) (i) and (ii)

(B) Answer:

Q. No.1-6 Carry Two Marks Each

6.

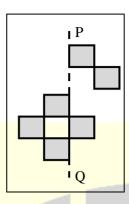

Corners are cut from an equilateral triangle to produce a regular convex hexagon as shown in the figure above.

The ratio of the area of the regular convex hexagon to the area of the original equilateral triangle is

- (A) 4:5 (B) 5:6 (C) 3:4 (D) 2:3

Answer: (D)

7.

The least number of squares that must be added so that the line P-Q becomes the line of symmetry is

- (A) 6
- (B) 3
- (C) 4
- (D) 7

Answer: (A)

- 8. p and q are positive integers and $\frac{p}{q} + \frac{q}{p} = 3$, then, $\frac{p^2}{q^2} + \frac{q^2}{p^2} =$
 - (A) 3
- (B) 9
- (C) 7
- (D) 11

Answer: (C)

9. Nostalgia is to anticipation as _____ is to _____

Which one of the following options maintains a similar logical relation in the above sentence?

(A) Future, present

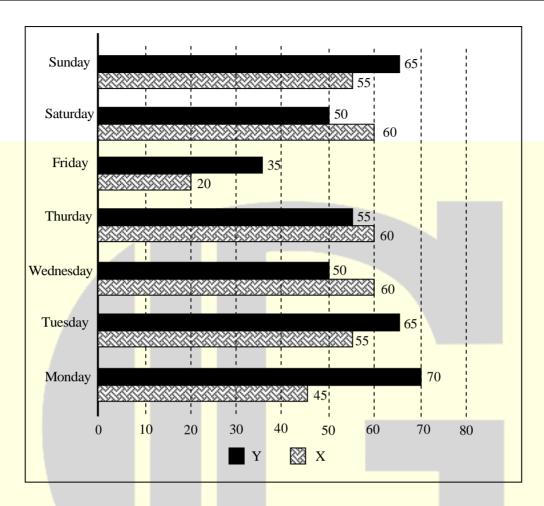

(B) Past, future

(C) Future, past

(D) Present, past

Answer: (B)

10.

The number of minutes spent by two students, X and Y, exercising every day in a given week are shown in the bar chart above.

The number of days in the given week in which one of the students spent a minimum of 10% more than the other student, on a given day, is

(A) 4

(B) 7

(C) 6

(D) 5

Answer: (C)

PRODUCTION & INDUSTRIAL ENGINEERING

Q. No. 1-25 Carry One Mark Each

1.	A product has an exponential time-to-failure distribution with a constant failure rate of 0.00006 per hour. The reliability of the product after 4000 hours of operation is							
	(A)	0.5866 (B)	0.6866	(C)	0.7866	(D)	0.8866	
Answe	er:	(C)						
2.		typical product develo					approach,	all elements of
	(A)	Product design stage		(B)	Process	design stage		
	(C)	Manufacturing stage		(D)	Disposa	al stage		
Answe	er:	(A)						
						\ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \ \		
3.		en acceptance number of or equal to 10, the Opera		•		•	s zero with	sample size less
	(A)	A horizontal line		(B)	A vertic	cal line		
	(C)	A convex function		(D)	An inve	erted S-shaped	curve	
Answe	er:	(C)						
4.		ch one of the following nique?	is an improvemen	t type h	euristic	algorithm for	computeriz	zed layout design
	(A)	Systematic layout plann	ing (SLP)					
	(B)	Computerized relative a	llocati <mark>on</mark> of faciliti	es techi	nique (C	RAFT)		
	(C)	Computerized relationsh	nip lay <mark>ou</mark> t planning	g (CORI	ELAP)			
	(D)	Plant layout analysis and	d evaluation techni	ique (PI	LANET)			
Answe	er:	(D)						
5.	Whi	ch one of the following i	s NOT a measure	of forec	ast error	?		
	(A)	Mean absolute deviation	ı (MAD)	(B)	Mean so	quared error (I	MSE)	
	(C)	Mean absolute percent e	rror (MAPE)	(D)	Mean si	um product er	ror (MSPE)
Answe	r:	(D)					. 	

6.	Pearlie microstructure in an eutectoid steel consists of alternating layers of two phases, name ferrite and		
	(A)	Martensite (B) Austentie	(C) Cementite (D) Bainite
Answe	er:	(C)	
7.	Whi	ch one of the following defects is NOT a	associated with welding processes?
	(A) Angular distortion		(B) Hot tear
	(C)	Hydrogen embrittlement	(D) Earring
Answ	er:	(D)	
8.	Mat	ch the component with the corresponding	g manufacturing process in the table below.
		Component	Manufacturing process
	P.	Aluminum alloy piston for IC engine	1. Blow molding
	Q.	Low carbon steel oil pan	2. Powder metallurgy
	R.	Tugsten carbide cutting tool insert	3. Sand casting
	S.	Plastic bottle	4. Deep drawing
	(A)	P-3, Q-2, R-1, S-4	(B) P-3, Q-4, R-2, S-1
	(C)	P-2, Q-3, R-4, S-1	(D) P-1, Q-3, R-2, S-4
Answ	er:	(B)	
9.	In a	turning operation, doubling the cutting s	speed (V) reduces the tool life (T) to $\frac{1}{8^{th}}$ of the original tool
	life.	The exponent n in the Taylor's tool life of	equation, $VT^n = C$ is
	(A)	$\frac{1}{(B)}$	(C) $\frac{1}{4}$ (D) $\frac{1}{8}$
	(A)	$\frac{1}{2}$ (B) $\frac{1}{3}$	(C) $\frac{4}{4}$ (D) $\frac{8}{8}$
Answ	er:	(B)	
10. Which one among the following mechanism is NOT used for transforming rotation to tramachine tools?			m is NOT used for transforming rotation to translation in
	(A)	Scrw-nut system	(B) 4-bevel gear type differential mechanism
	(C)	Cam and cam follower system	(D) Whitworth mechanism
Answ	er:	(B)	

11. Match the Measuring feature with the corresponding Measuring instrument in the table below.

	Measuring feature		Measuring instrument
P.	Flatness error of a surface	1.	Auto collimator
Q.	Profile or a cam	2.	Tool maker's microcope
R.	Alignment error of a machine tool slide	3.	Dividing head and dial gauge
	way		
S.	Pitch and angle error of screw thread	4.	Optical interferometer

(A) P-4, Q-1, R-2, S-3

(B) P-1, Q-3, R-4, S-2

(C) P-2, Q-4, R-3, S-1

(D) P-4, Q-3, R-1, S-2

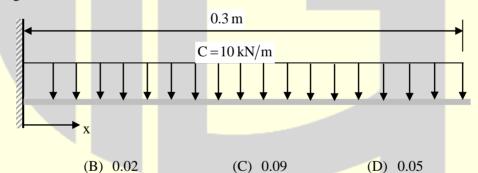

Answer: (D)

12. The frequency of pulsing in die-sinking electric discharge machine (EDM) is 10 kHz. The pulse off-time is set at 40 micro-seconds. The duty factor at this setting is

- (A) 0.40
- (B) 0.60
- (C) 0.67
- (D) 2.50

Answer: (D)

A cantilever beam of length 0.3 m is subjected to a uniformly distributed load C = 10 kN/m, as shown in the figure. The bending (flexural) rigidity of the beam is 5000 Nm². Neglecting the self-weight of the beam, the magnitude of beam curvature in m^{-1} at the fixed end is

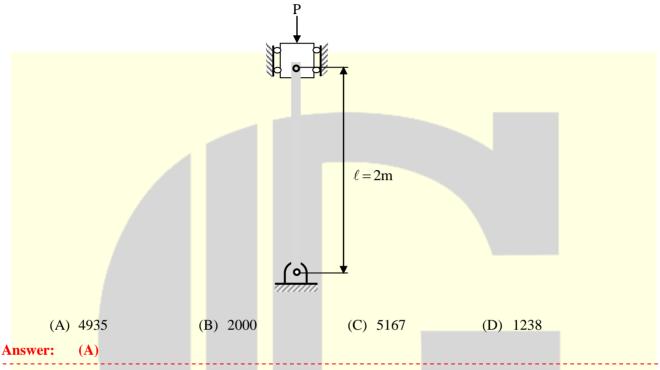

Answer:

(C)

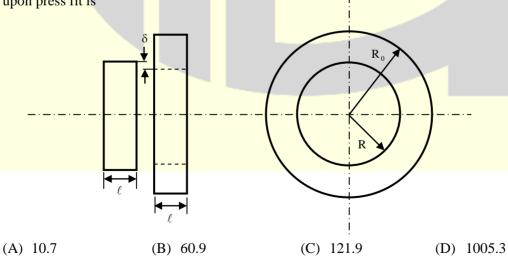

(A) 1.10

14. A circular rod of length $\ell = 2$ m is subjected to a compressive load P, as shown in the figure. The bending (flexural) rigidity of the rod is 2000 Nm². If both ends are pinned, then the critical load P_{cr} in N(rounded to the nearest integer) at which the rod buckles elastically is

Two cylindrical parts of equal length ℓ , as shown in the figure, made of steel having Young's module E=200 GPa and Poisson's ratio v=0.33 are press fitted upon one another. If radial interference $\delta=0.05$ mm, and radii R=25 mm and $R_0=40$ mm, then the contact pressure P in MPa at the interface upon press fit is

Answer: (C)

16.	The dimensionless number defined by the ratio	of inertial force to viscous force is called		
	(A) Mach number	(B) Froude number		
	(C) Weber number	(D) Reynolds number		
Answe	er: (D)			
17.	A smallo capillary tube of 3 mm inner diameter is inserted into a fluid having density 900 kg/m 3 , surface tension 0.1 N/m, and contact angle 30 $^\circ$. The rise in the height of fluid in the capillary tube due to surface tension is			
	(A) 111.4 mm (B) 128.3 mm	(C) 89.1 mm (D) 154.1 mm		
Answe	r: (*)			
18.	A given steel has identical yield strength of 700	MPa in unit-axial tension and uni-axial compression. If		
	the steel is subjected to pure shear stress such th	nat the three principal stresses are $\sigma_1 = \sigma$, $\sigma_2 = 0$, $\sigma_3 = -\sigma$		
	with $\sigma_1 \ge \sigma_2 \ge \sigma_3$, then the stress σ in MPa for	r the initiation of plastic yielding in the steel as per von		
	Mises yield criterion is (round or	ff to 2 decimal places)		
Answe	r: (404.1-404.2)			
19.	two stages at a deformation speed of 4 mm/min	gauge length 50 mm and diameter 10 mm is extended in . The specimen is extended from 50 mm to 55 mm in the second stage. Neglecting elastic deformation, the total off to 2 decimal places).		
Answe	er: (0.18)			
20.	A M30 bolt needs to be subjected to pretention then the torque in Nm needed to achieve this pre	$F_i = 350 \text{ kN}$. If the torque coefficient K of the bolt is 0.2, etension is (in integer).		
Answe				
	(2200)			
21.	* ·	nitting 15 kW power through a belt-pulley system. The ing at 200 RPM. If F ₁ is the belt tension on high tension		
		ide, then the difference in belt tensions $\Delta F = F_1 - F_2$ in N		
	is (round off to one decimal place).	1 -2		
Answe	er: (9549.1-9549.4)			
	© All rights reserved by Thinkcell Learning Solutions Pvt. Ltd. No part of this b	ooklet may be reproduced or utilized in any form without the written permission.		

22.	Heat is being removed from a refrigerator at a rate of 300 kJ/min to maintain its inside temperature at
	2°C. If the input power to the refrigerator is 2kW, the coefficient of performance of the refrigerator is
	(round off to one decimal place).

(2.5)Answer:

23. In an ideal Otto cycle, 800 kJ/kg is transferred to air during the constant volume heat addition process and 381 kJ/kg is removed during the constant volume heat rejection process. The thermal efficiency in % of the cycle is _____(rounded off to one decimal place).

Answer: (52.2-52.5)

If (3i+1)x+(4i+4)y+5=0 with x, y being real and $i=\sqrt{-1}$, then x= _____ (correct up to one 24. decimal place).

(2.5)Answer:

25. The minimum value of function f defined by

$$f(x,y,z) = x^2 + 5y^2 + 5z^2 - 4x + 40y - 40z + 300$$

is _____ (integer)

Answer: (136)

Q. No. 26-55 Carry Two Marks Each

26. For a given process control charge, there are four rules for determinant out-of-control state of the process which are being used simultaneously. The probability of Type-I error for the four rule are 0.005, 0.02, 0.03, and 0.05. Assuming independence of the rules, the probability of overall Type-I error when all the four rules are used simultaneously is

(A) 0.101

- (B) 0.201 (C) 0.001 (D) 0.301

Answer: (A)

27. An in-control process has an estimated standard deviation of 2 mm. The specification limits of the component being processed are 120 ± 8 mm. When the process mean shifts to 118 mm, the value of the process capability indices, C_p and C_{pk} , respectively are,

(A) 1.000, 1.667

- (B) 1.333, 1.667 (C) 1.333, 1.000 (D) 1.000, 1.000

Answer:

28.	There are a number of identical components in a parallel system. When the system reliability is 0.97 and
	the reliability of each individual component is 0.68, the number of identical components in the system is
	(if actual value is a fraction, it may be rounded up to the next higher integer).

(A) 2

(B) 4

(C) 6

(D) 8

Answer: **(B)**

29. A retail chain company has identified four sites A, B, C and D to open a new retail store. The company has selected four factors as the basis for evaluation of these sites. The factors, their weights, and the score for each site are given in the following table.

Factor	Factor weight		Score for site (out of 100)		
		A	В	C	D
Average community income	0.4	60	70	80	50
Demand growth potential	0.1	30	80	50	40
Proximity to existing store	0.3	50	10	40	60
Availability of public transport	0.2	40	30	40	20

The site that should be selected to open the new retail store is

(A) Site A

(B) Site B

(C) Site C

(D) Site D

(C) Answer:

30. In the classical economic order quantity (EOQ) model, let Q and C denote the optimal order quantity and the corresponding minimum total annual cost (the sum of the inventory holding and ordering costs). If the order quantity is estimated incorrectly as Q' = 2Q, then the corresponding total annual cost C' is

(A) C' = 1.25C

(B) C' = 1.5C (C) C' = 1.75C (D) C' = 2C

Answer: (A)

The eigen values of matrix $A = \begin{bmatrix} 8 & 3 \\ 2 & 7 \end{bmatrix}$ are 5 and 10. For matrix $B = A + \alpha I$, where α is a constant and 31.

I is 2×2 identity matrix, its eigen values are

(A) 5, 10

(B) $5+\alpha, 10+\alpha$ (C) $5-\alpha, 10-\alpha$ (D) $5\alpha, 10\alpha$

Answer: **(B)**

32. A company manufactures two products P and Q with unit profit of 4 and 5, respectively. The production requires manpower and two kinds of raw materials R1 and R2. The following table summarizes the requirement and availability of resources.

Resource	Resource usage per unit	Amount of resource available	
	P	Q	
Manpower	1	1	10
R1	1	2	18
R2	2	1	18

The maximum profit the company can make is

- (A) 45
- (B) 48
- (C) 42
- (D) 54

Answer: (B)

- 33. A tool of an NC machine has to move along a circular arc from (20, 20) to (10, 10), while performing an operation. The centre of the arc is at (20, 10). Which one of the following NC tool commands performs the above mentioned operation?
 - (A) N020 G03 X20 Y20 X10 Y10 R10
- (B) N020 G02 X20 Y20 X10 Y10 R10
- (C) No 20 G02 X10 Y10 X20 Y20 R10
- (D) N020 G01 X20 Y20 X10 Y10 R10

Answer: (A)

- 34. In a shaft-hole assembly, the hole is specified as $30_{0.000}^{0.040}$ mm. The mating shaft has a clearance fit with minimum clearance of 0.01 mm. The tolerance on the shaft is 0.3 mm. The maximum clearance in mm between the hole and the shaft is
 - (A) 0.04
- (B) 0.05
- (C) 0.08
- (D) 0.10

Answer: (C)

- 35. 'GO' and 'NO GO' snap gauges are to be designed for a shaft 36.000^{+0.070}_{+0.010} mm. Gauge tolerance can be taken as 5% of the hole tolerance. Following the ISO system of gauge design, the respectively size of 'GO' and 'NO GO' gauges are
 - (A) 36.013 mm and 36.067 mm
- (B) 36.015 mm and 36.065 mm
- (C) 36.018 mm and 36.062 mm
- (D) 36.020 mm and 36.060 mm

Answer: (A)

G	ngineering Success	I	PI-GATE-2021	www.gatefor	rumonline.com
36.	the time taken in	•	through a 5cm diameter	nost steady flow and negle or hole located at the central of to the nearest integer)	-
	(A) 5005	(B) 1807	(C) 8097	(D) 3154	
Answ	ver: (A)				
37.	The probability	mass function P(x) of a	discrete random varial	ble X is given by $P(x)$ =	$=\frac{1}{2^x}$, where
	$x = 1, 2,, \infty$. The	expected value of X is _	(in integer).		
Answ	ver: (2)				
38.	mean time to pas clear the security	s through the security sc	reening is 15 minutes.	ows and exponential distriction. To catch the flight, a passat the passenger will miss	senger must

39.	are available for	processing on the first da	ny of the production scl	ng on a single CNC mach hedule calendar, and proc ing earliest due date rule,	essing times

tardiness (in days) is_____ (in integer).

Job	Processing time (in days)	Due date (day)
A	8	14
В	5	10
С	7	12
D	9	19

Answer: (4)

4 <mark>0</mark>).	A time study is carried out for a spot welding operation which is being performed by an operator. The
		time taken (in seconds) for five observations are recorded as 40, 35, 45, 37 and 43, respectively. If the
		standard time and the allowance for this operation are 45 seconds and 9 seconds, respectively, then the
		performance rating (in percentage) of the operator is(in integer)

Answer: (90)

41.	The initial cost of a machine is INR 10,00,000 and its salvage value after 10 years of use is INR 50,000.
	Using the straight line depreciation method, the book value in INR of the machine at the end of 7th year
	is (in integer).

Answer: (335000)

42. A project consists of eight activities. The time required for each activity and its immediate predecessor(s) are given in the table below.

Activity	Activity	time (in d	lays)	Immediate predecessor (s)			
A		2		ı			
В		3		1			
C		2		A			
D		4		A, B			
Е		4		С			
F		3		С			
G		X		D, E			
Н		2		F, G			

If the project completion time using critical path method (CPM) is 15 days, then the value of X (in days) is _____ (in integer)

Answer: (5)

43. A wire of 5 mm diameter is drawn into a wire of 4 mm diameter through a conical die at a constant pulling speed of 5 m/s. Neglecting the coefficient of friction and redundant work, the drawing stress

 $\left(\sigma_{d}\right)$ in MPa for the above process is given by $\sigma_{d}=\overline{\sigma}\ell n\left[\frac{1}{1-r}\right]$, where $\overline{\sigma}$ is the mean flow strength of

wire material in MPa, and r is the ratio of decrease in area of cross-section to initial area of cross-section of the wire. If the mean flow strength of wire material is 600 MPa, then the power required in kW in the above wire drawing process is ______. (round off to 2 decimal places)

Answer: (16.8-16.84)

In an arc welding process, the DC power source characteristics is linear with an open circuit voltage of 60V and short current of 600A. The heat required for melting a metal during the welding is 10 J/mm³, and the heat transfer and melting efficiencies are 80% and 25%, respectively. If the weld cross-sectional area of 20 mm² is made using the maximum are power, then the required welding speed mm/s is ______ (round off to one decimal place).

Answer: (8.8-9.2)

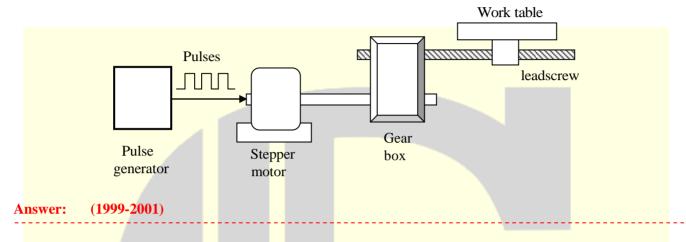

Answer: (0.193-0.203)

45	5.	A company is producing a disc-shaped product of 50 mm thickness and 1.0m diameter using sand casting process. The solidification time of the above casting process is estimated by Chvorinov's
		equation $t = B \left[\frac{V}{A} \right]^2$, where B is the mold constant, and V and A are the volume and surface area of the
		casting, respectively. It is decided to modify both the thickness and diameter of the disc to 25 mm and 0.5m, respectively, maintain the same casting condition. The percentage reduction in solidification time
		of the modified disc as compared to that of the bigger disc is (round off to one decimal place).
A	nswe	er: (74.5-75.5)
40 A	5. nswe	A single point cutting tool with 15° orthogonal rake angle is used to machine a mild steel plate under orthogonal machining condition. The depth of cut (uncut thickness) is set at 0.9 mm. If the chip thickness is 1.8 mm, then the shear angle degree is (rounded off to one decimal place).
47	7.	The top layer of a flat 750 mm \times 300 mm rectangular mild steel plate is to be machined with a single depth of cut using a shaping machine. The plate has been fixed by keeping 750 mm side along the tool travel direction. If the approach and the over-travel are 25mm each, average cutting speed is 10 m/min, feed rate is 0.4 mm/stroke, and the ratio of return time to cutting time of the tool is 1:2, the time (in minutes) required to complete the machining operation is (round off to one decimal place).
A	nswe	er: (89-91)
48	3.	A 3 mm thick steel sheet, kept at room temperature of 30°C, is cut by a fibre laser beam. The laser spot diameter on the top surface of the sheet is 0.2 mm. The laser absorptivity of the sheet is 50%. The properties of steel are density = 8000 kg/m³, specific heat = 500 J/kg.°C, melting temperature = 1530°C,
		and latent heat of fusion = 3×10^5 J/kg. Assume that melting efficiency is 100% and that the kerf width is equal to the laser spot diameter. The maximum speed (in m/s) at which is equal to the laser spot diameter. The maximum speed (in m/s) at which the sheet can be fully cut at 2 kW laser power is

49. In a point-to-point open-loop NC drive, a stepper motor with 1.8° step angle is coupled to a leadscrew through a gear reduction of 4:1 (4 rotations of the motor enables 1 rotation of leadscrew). The single-start leadscrew has a pitch of 4 mm. The worktable of the system is driven by the leadscrew. If the table moves at a uniform speed of 10 mm/s, the pulse frequency (in Hz) required to drive the stepper motor is ______ (round of to one decimal place).

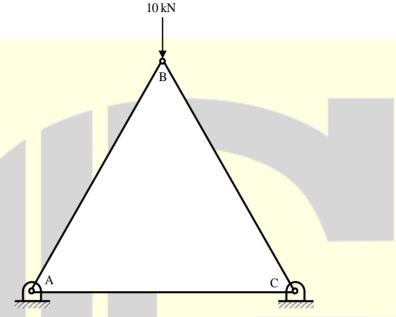

50. A 30 kg smooth, solid sphere rests on two frictionless inclines as shown the figure. The magnitude of contact force in N acting at the point A is (take acceleration due to gravity $g = 9.81 \text{ m/s}^2$ and consider both sphere and inclines to be rigid) ______. (round off to 2 decimal place)

Answer: (147)

51. Consider the truss shown in the figure. The members AB, BC and CA are all rigid and form an equilateral triangle. The contact between roller and ground at C is frictionless. If the self-weight of members is neglected, the force in member BC in N is (negative sign should be used if the force is compressive and positive if the force in the member is tensile) ______(round off to one decimal place).

Answer: (-5773.7 to -5773.4)

A fluid with dynamic viscosity $\mu=1$ Pa.s is flowing through a circular pipe with diameter 1 cm. If the flow rate (discharge) in the pipe is 0.2 liter/s, the maximum velocity in m/s of the fluid in the pipe is (assume fully developed flow and take fluid density $\rho=1000\,\mathrm{kg/m^3}$) _____ (round off to one decimal place)

Answer: (5.1)

Value of function y(x) at discrete values of x for $0 \le x \le 10$ are given in table. Using trapezoidal rule, $\int_{0}^{10} y(x) dx =$ ______. (round off to one decimal place).

X	0	1	2	3	4	5	6	7	8	9	10
y(x)	5	3	0	-5	-10	-6	0	5	11	18	30

Answer: (33.5)

Answer:

Temperature field inside a sphere of radius R = 1m with origin at its centre is $T(x,y,z) = 100 - 70x + 51y - 80z - 10x^2 - 20y^2 - 20z^2$. If thermal conductivity of the sphere material is K = 50 W/m.K and Fourier law of heat conduction is valid, net heat leaving the sphere per unit time in W is ______(round off to one decimal place).

Answer: (20943.8-20944.1)

(1.9)

A 3.5 mm thick sheet is rolled using a two high rolling mill to reduce the thickness under plane strain condition. Both rolls have a diameter of 500 mm and are rotating at 200 RPM. The coefficient of friction at the sheet and roll interface is 0.08, and the elastic deflection of the rolls is negligible. If the mean flow strength of the sheet material is 400 MPa, then the minimum possible thickness (in mm) of sheet that can be produced in a single pass is ______ (round off to 2 decimal places).
